The world around us is filled with fascinating things. Exploring this beautiful planet is exciting for many people. One group that studies the world is scientists. A scientist explores nature, animals, or human life. They work hard and do research to solve problems, discover facts, or create new inventions. Scientists learn about the world through careful observation and experiments.

There are many kinds of scientists. Some focus on plants, the earth, oceans, or animals. Others study people, how they think, behave, and learn. Some enjoy studying history or languages, while others are interested in designing or building new tools and technologies. Their goal is to improve daily life.

Some scientists become rich or well-known, and people may remember their names and faces. But to them, true success comes from solving problems and finding answers to important questions

1. Scientists learn about the world by guessing and imagining.

→ False / True

2. Some scientists focus on studying people and how they behave.

→ True / False

3. What are some areas that scientists study?

Some focus on plants, the earth, oceans or animals. Others study people, how they think, behave and learn.

4. How do scientists learn about the world?

Scientists learn about the world through careful observation and experiments.
